EDUCATION

BMS Institute of Technology and Management, Bengaluru, Karnataka
B.E in Information Science and Engineering (2023 – 2027)
Current: 4th Year CGPA: 8.91/10
Relevant Coursework: Data Science, Data Analytics, DBMS, OOP, DSA, OS.

PROFILE SUMMARY

- Analyzed datasets using Python, SQL, and visualization tools across **5+ projects** to support data-driven decision-making
- Built analytics solutions using **35K+** records across e-commerce, telecom, and NLP datasets to generate **predictive insights** and drive **actionable decisions**
- Led marketing and behavioral analytics initiatives, improving customer engagement by **25%** and contributing to **15%** revenue growth

EXPERIENCE

Growth & Analytics Intern *March 2025 – July 2025*
Fastr, Bengaluru, Karnataka

- Analyzed campaign performance and audience engagement trends across digital channels, contributing to a **30%** increase in online engagement and reach
- Executed **10+** online and offline growth initiatives while tracking performance metrics to evaluate campaign effectiveness and customer response
- Conducted market, competitor, and customer behavior analysis to identify **5+** differentiation opportunities for customer acquisition and service positioning

PROJECTS

1. Brand Performance & Pricing Strategy Dashboard
Tools: ***Power BI, Python, Pandas, Scikit-learn***

- Built an interactive analytics dashboard analyzing **500+ brands**, enabling data-driven pricing and product performance evaluation.
- Engineered **6+ business metrics** including Pricing Power, Demand Score, and Discount Segmentation using **Python** and **SQL** to automate performance analysis.
- Applied **KMeans clustering** and correlation analysis, revealing a weak correlation (**0.13**) between discounting and customer ratings.

2. Customer Churn and Revenue Forecasting System
Tools: ***Python, Scikit-learn, SQL, Pandas***

- Built an end-to-end churn prediction pipeline using Logistic Regression and Random Forest, achieving **81% accuracy** on **7K+** telecom customer records.
- Conducted customer retention and churn analysis across 20+ behavioral attributes to identify **drop-off patterns**, churn drivers and high-risk customer segments.
- Engineered **8+ engagement-focused features** including tenure segmentation, spending categories, login activity, and support interaction indicators.

3. Fake Review Detection System
Tools: ***Python, NLP, Scikit-learn, Pandas, NLTK, XGBoost***

- Developed an NLP-based review classification system on **9K+ customer reviews** using TF-IDF vectorization and machine learning models.
- Achieved up to **98.13%** test accuracy using tuned **XGBoost**, while comparing performance with Logistic Regression, Naive Bayes, Decision Tree, and Random Forest.
- Applied preprocessing techniques including tokenization, stopword removal, lemmatization, and bi-gram TF-IDF, while evaluating **5 ML models** using cross-validation.

Core Skills

- **Languages:** Python, SQL, HTML, JavaScript, Java, C
- **Tools:** Excel, Power BI, Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn, NLTK, Git/GitHub
- **AI & Strategy:** ML, NLP, Predictive Analytics, Dashboarding, Automation, Strategic Thinking, Communication
